SUMMARY

Systems Analysis and Development student (5th semester) working as an apprentice at DIME Distribuidora, a distribution company in Rio de Janeiro, since January 2026. In the fleet department, every control lived in a separate spreadsheet and deadlines depended on someone checking them by hand. I built a system to bring it all together, which the department now uses, and then four more for the fleet, sales, quality and third-party transport teams. I work mainly with JavaScript and Supabase/PostgreSQL and use AI tools to build faster.

Looking for: junior or internship roles in process automation, process analysis or internal tools development. Open to remote work.

EXPERIENCE

DIME Distribuidora

Rio de Janeiro, Brazil

Fleet Assistant (Apprentice) — Apr 2026 – present

- Handle the fleet department's administrative routine: vehicles, drivers, traffic fines, maintenance and tachographs.
- Built the fleet management system that replaced the department's spreadsheets (expiry alerts, per-vehicle history, PDF and Excel reports, change log) and migrated the old records into it.
- Produced the monthly fuel efficiency reports for management (Apr–Jul 2026): defined the weighted km/L calculation and the rules to discard inconsistent odometer readings.
- Used OCR to read 334 service invoices and find the vehicle plates in them, instead of opening each document.
- Gathered needs from drivers, the workshop, quality and admin staff, which led to the other systems listed below.
- Covered the department's administrative work while the supervisor was on vacation.

Shipping Assistant (Apprentice) — Jan 2026 – Mar 2026

- Worked in the distribution operation, where I learned how day-to-day operations depend on the administrative teams.

PROJECTS

Fleet Management System

Jun 2026 – present · in use

One platform for vehicles, drivers, fines, maintenance, oil changes, tachographs, daily workshop output, accidents and incidents, with attachments, alerts, per-vehicle history, a km/L indicator and monthly reports.

JavaScript · Supabase · PostgreSQL · Vercel · jsPDF · Chart.js | demo · code

Company Car Control

2026 · live, still evolving

Check-out and return of the sales team's cars with digital signature, customer route on a map, before/after photos and a mobile area for drivers.

JavaScript · Supabase · Leaflet · PWA | demo · code

10S Quality System

2026 · being rolled out

Turned a static PDF inspection report into a workflow: non-conformity, photo, corrective action, effectiveness check and an automatically generated report. 10S audits follow the company's official spreadsheets.

JavaScript · Supabase Realtime · jsPDF | demo · code

Vehicle Checklists and Incidents

2026 · implemented

Arrival checklist with a walk-around video of the vehicle that works offline and uploads when the connection is back. Accidents and damage are logged with photos, videos and documents.

PWA · IndexedDB · MediaRecorder · Supabase Storage | demo · code

Contract Drivers and CIOT Control 2026 · in development

Jobs, CIOT freight records and incidents for contract drivers, with commission and bonus calculated per fortnight.

JavaScript · Supabase | demo · code

ORION (personal project) Oct 2026 – present · in development

An assistant that builds web systems from a text or voice request: it writes the spec, generates the code, runs tests and takes changes through conversation, keeping every version. Works with different AI models, including local ones. Generated 10 systems during testing.

Node.js · SQLite · AI models · speech recognition | details in the portfolio

SKILLS

- Sitting with the people who do the work to understand the process and where it gets stuck
- Turning spreadsheets and paper into systems: records, workflow, status, alerts and reports
- Defining calculation and data validation rules (km/L fuel efficiency, commissions)
- Records with evidence: photos, video, digital signature and change history

Tools: JavaScript, HTML, CSS, Supabase (PostgreSQL, Storage, Realtime), PWA, Node.js, SQLite, jsPDF, Chart.js, Leaflet, OCR, Vercel, AI tools

EDUCATION

Associate degree in Systems Analysis and Development – UNISUAM Mar 2025 – Jul 2027 (expected)

Currently in the 5th semester

LANGUAGES

Portuguese (native) · English (intermediate, Wizard by Pearson, 2024–2026)
